GRADUATE STUDY PROGRAMME IN CHEMICAL AND BIOMOLECULAR ENGINEERING

Dear prospective students

We are particularly pleased to announce the new cycle of our graduate study programme in the field of **Chemical and Biomolecular Engineering**. We are also proud that, since the first year of its operation, the Graduate Study Programme (GSP) was selected by graduates from a wide range of fields. We live in a society that increasingly requires co-operation and interaction between scientists of various disciplines. Consequently, one of our main goals is, during your graduate studies, the collaboration and interaction between students that have different academic background. We will try to strengthen the spirit of cooperation, to support your desire to acquire new knowledge and skills as well as to help you envisage your career after graduation. Thus, we believe that by participating in this graduate programme, you will improve your academic qualifications and acquire skills that will be useful for your career.

Keep in mind that Aristotle University of Thessaloniki (*AUTH*) is the best multi thematic university in Southeastern Europe. AUTH was established in 1925 and currently has approximately 75.000 students. The university campus is located in the heart of the city.

[Thessaloniki](#), in the district of Macedonia, Greece, counts more than a million inhabitants, the second largest city in Greece. More importantly, it is a city with a continuous 2500-years history, preserving relics of its Hellenic, Roman, Byzantine and Ottoman past and of its formerly dominant Jewish population. Today Thessaloniki is a vibrant student city and it is considered one of the best cities to live and study in.

On behalf of the faculty members of the GSP I will be happy to welcome you to the Department of Chemical Engineering and to wish you a prosperous study and a pleasant stay in Thessaloniki.

Andreana Assimopoulou, Associate Professor
Director of Graduate Study Programme
